23 June 2026

A joint call to Labour's next leader

June 2026 - A cross-sector call to reset the Government's approach to nature recovery

Dear Mr Burnham,

This letter - building on the [joint statement on nature published on 16 February 2026](#) and the ['red lines for nature' published on 14 April 2026](#) - calls on Labour's next leader urgently to reset the Government's approach to nature recovery. Significant regressions in environmental legal protections, introduced by this Government, have left our vital natural assets and ecosystems more vulnerable to degradation and loss than they have ever been. Laws that once required harm to be avoided now permit unmeasured and accelerated habitat loss. Manifesto pledges on climate, nature, green access and sustainable farming have been all but abandoned.

The Labour Party Manifesto 2024 pledged to “deliver for nature... without weakening environmental protections.” These pledges were integral to the platform voters trusted Labour to deliver. The four asks below represent the minimum commitment needed to honour those pledges, rebuild public trust, and meet the scale of the growing national emergency.

FOUR ASKS - THE MINIMUM COMMITMENT REQUIRED

Ask 1: Build nature into our national economic and security infrastructure.

Nature underpins the UK's economy, public health, food security and national resilience, yet is treated as peripheral rather than essential. Candidates must commit to:

- A Strategic Nature Network — recognised as critical national infrastructure — to connect and restore ecosystems at scale, unlocking long-term private investment
- A Resilience and Adaptation Commissioner to drive cross-government accountability on climate and nature breakdown

- A National Nature Jobs Strategy to continue to grow skilled, future-proof employment and technical education pathways across the national nature economy

Ask 2: Protect nature at the point of harm.

The Habitats Regulations and Biodiversity Net Gain (BNG) laws together ensure environmental destruction is avoided, minimised and compensated for before it occurs, embedding nature protection into early development decisions, accelerating good, green growth. This Government is dismantling these laws. Candidates must:

- Immediately halt Environmental Delivery Plans which risk slowing development, and comprehensively assess their economic, social, environmental and health impacts
- Reject proposed expansions to BNG exemptions and support the continued implementation and improvement of these laws. When done well, these laws circulate investment locally while accelerating housing delivery in a high-trust planning environment.

Decades of protections for biodiversity are being reversed precisely when those protections are needed the most. Strong and clear biodiversity protections enable and accelerate a high-trust, locally resilient national development programme.

Ask 3: Back Nature-Friendly Farming and follow the evidence.

Farming that works with nature improves soil health, water quality, biodiversity and climate resilience while strengthening farm businesses and rural communities. Candidates must:

- Support sustainable, nature-friendly farming with long-term certainty and evidence-based policy
- Unequivocally end badger culling by the end of the next parliamentary session — a clear signal of commitment to science-led policymaking and effective use of public funds
- Fulfil Labour's election pledge to ban bee-killing pesticides

Food production, nature recovery and rural prosperity are not competing objectives. They are mutually reinforcing goals.

Ask 4: Put communities, health and nature at the heart of planning

Short-term pressures have produced developments that erode local character, reduce nature access and degrade biodiversity. Reform of the planning system must:

- Replace growth-at-all-costs presumptions with genuinely plan-led, sustainable development
- Make access to nature a public health right; prioritise densification over greenfield loss

- Introduce legal protections for chalk streams; mandate swift bricks in all new development
- Build trust in, and invest in, our institutions for effective regulation: planning authorities, national parks, Local Government, Natural England and the Office for Environmental Protection

Why this cannot wait

Nature breakdown is already a security threat, a public health crisis and an acute economic risk. The Joint Intelligence Committee has warned that every critical ecosystem the UK relies on is now on a path to collapse, with consequences for food security, displacement and global instability.

3 of the 5 worst harvests on record in England have occurred since 2020
£360 added to average household food bills from climate impacts in 2022-23
6.3 million properties now at risk of flooding; 30% of new homes built in flood-risk zones
£3bn/year cost of extreme heat to the NHS - and the health service is not prepared
£350m of private investment channelled into natural resilience via BNG since 2024
2,500 jobs/ £250-450m annual economic value of BNG laws (if left intact) rising to £3bn by 2035

Weakening environmental safeguards will not build more homes (see the [Environmental Audit Committee inquiry](#)). It will instead enable lower-quality development in the wrong places, at greater long-term cost to our national resilience and the public purse. Part 3 of the Planning and Infrastructure Act introduced by Labour now permits unmeasured habitat and species loss. Reversing BNG laws will accelerate it.

The winner of this leadership contest will inherit a national emergency: a planning system under untenable strain, food, defence and energy security in peril, fractured communities and a deepening health crisis. None of these can be adequately addressed without protecting our natural assets. Nature underpins every corner of our economy, our national identity and our society.

The stakes are too high for equivocation. We call on Labour's next leader to commit — publicly and specifically — to protecting nature at the point of harm, backing evidence-led nature-friendly farming, investing in natural infrastructure, enabling healthy access to green space, and safeguarding the ecosystems that underpin our national security.
